

MARK Falcon

Descender device / EN 341

MARK Falcon is a Personal Protective Equipment (PPE) against falls from a height and has been designed for use in combination with PPE certified according to EN 361, EN 1497, EN 1498, EN 795 and EN 362. MARK Falcon is certified according to EN 341 and has been tested by TÜV Austria.

Who needs MARK Falcon?

MARK Falcon has been designed especially for amateur users and self-rescue purposes, e.g. as an escape route in case of a fire (hotels, schools, offices, private buildings etc.).

Use

MARK Falcon is self-braking, i.e. you do not have to hold on to the rope while descending. Persons who have to escape from a danger zone (e.g. because of a fire, when the escape way/the stairs are blocked) quickly have a reliable and easy-to-use tool at hand.

Braking system - maximum safety

MARK Falcon comes with a redundant braking system. The brake drums are made of steel. This ensures your safety while you are descending.

Inspection

MARK Falcon has to be inspected after 2,000m or after being subjected to major loads (e.g. a rescue deployment) by MARK Save A Life or by a competent person.

Key data

- Descent load: min. 30kg
- Descent load: max. 150kg
- Descent speed: ca. 0.8m/sec
- Self-braking
- 10 years maintenance-free (original packaging)
- Steel housing
- Light metal carabiner
- Polyamide kernmantle rope

Combination with MARK products

MARK Falcon should be used only in combination with PPE certified according to the respective EN norms.

We recommend the use as self-rescue system in combination with MARK Grizzly rescue overall, MARK Boa tape sling and/or MARK Gekko anchor point.
